

**99.97%**  
of PFAS  
substances  
are removed

## Revolutional technology for PFAS removal

### SUPERIOR EFFECT

Field trials and independent analysis by an accredited laboratory show that the LifeClean method removes  $\geq 99.97\%$  of PFAS substances. The tests were conducted in real-life environments and under extreme conditions such as heavily contaminated tanks, e.g., 700 million ng/L of PFAS TOP, which was reduced by 99,994%.

### MORE SUSTAINABLE

LifeClean is not classified as dangerous according to EG 1272/2008 (CLP). LifeClean reacts immediately, breaks down quickly and leaves no hazardous residuals or toxic compounds. Easily degradable and do not accumulate in nature.

### COST-EFFECTIVE

With new demands regarding PFAS-levels in tanks used for fire fighting foam, many organisations are forced to replace their current tanks which is very expensive and time consuming. With LifeClean PFAS removal process all tanks can be restored free from PFAS and continue to be used.

Test site: Södertörn's firefighting association  
Laboratory: Eurofins Water Testing Sweden AB  
Analysis: PFAS 35/SLV11/4, and TOP.
